

SPEAKER ALERT

Add the power of Speaker Alert to your emergency communications

SAFE

As an integrated component of RapidReach, you can be assured that the in-built security controls will protect you and your data.

PRACTICAL

Speaker Alert can be in a static location or portable, the choice is yours. No need for fixed cabling or costly installations.

EASY

Register the Speaker and add it to one or several groups. You'll be up and running in minutes.

WHAT IS SPEAKER ALERT?

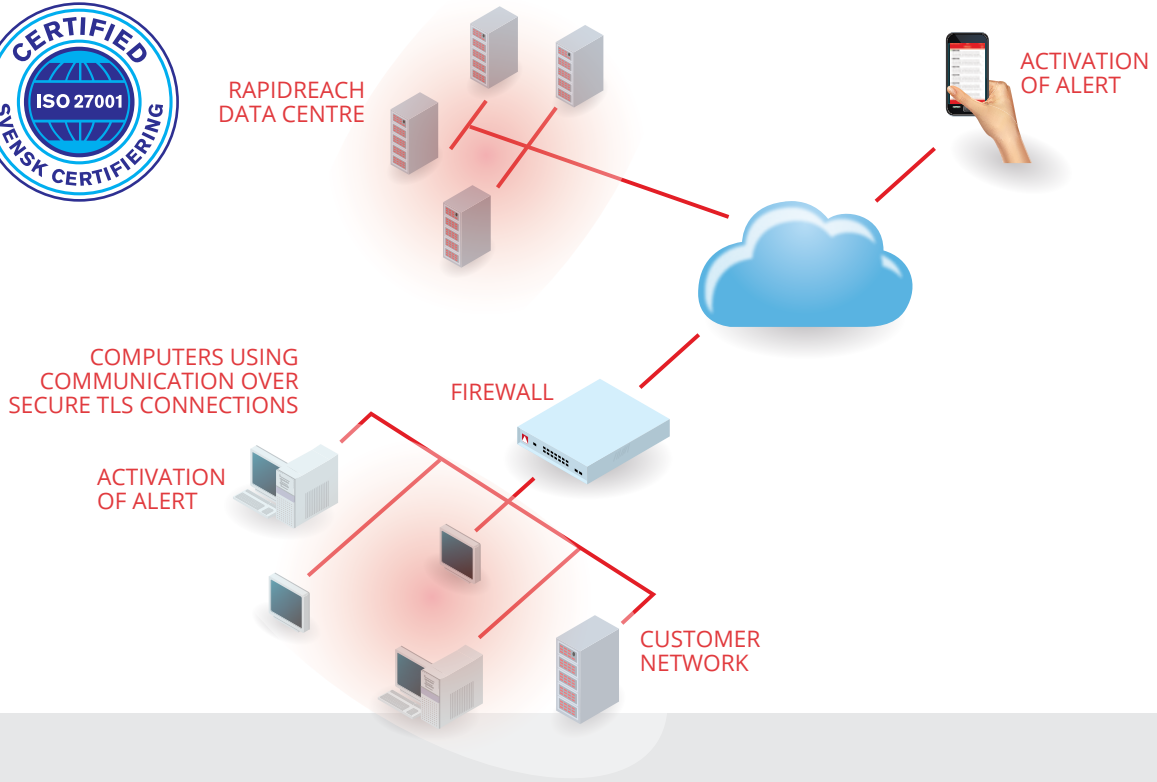

Since 1996, Enera's RapidReach call-out software has provided organisations with a robust, straightforward, notification solution.

Speaker Alert is an integrated component of RapidReach. The speaker can receive messages over a data connection or via a connection to a host Wi-Fi network. All communication is encrypted and transmitted using Transport Layer Security.

Simply add Speaker Alert as a contact alternative, and either incorporate it into existing call cascades or create a stand-alone call-out.

A 24 hour battery backup ensures resilience throughout a power outage. This non-reliance on a power source makes the speaker a portable solution.

ALERTING

Communicate a pre-set message or create a bespoke message on-the-fly.

Speaker Alert allows you to deliver an appropriate message, within seconds.

USAGE

Speaker Alert can be used in a variety of situations:

- Muster a response team in seconds
- Alert an area to a specific danger, for example, an airborne contamination
- Terrorist Incident Test
- Drills

RAPIDREACH SPEAKER ALERT SHORT FACTS

- Volume: 105 dB (from one metre)
- Battery backup for 24 hours
- The flexibility of a data connection and connection to a Wi-Fi network to provide resilient coverage
- Broadcast appropriate bespoke messages rather than an overreliance on preset messages
- Static or portable, a highly flexible solution
- Encrypted TLS connections
- No fixed cabling or costly installation
- Send different messages to different speakers simultaneously
- An audit trail of messages delivered
- Multilanguage support
